

R0cketShip

CONFIDENTIAL INVESTMENT MEMORANDUM

The **Plus** Network

A predictive-data roll-up — anchored by 1-800-MEDIGAP

One company consolidating R0cketShip's IP, a portfolio of top-of-funnel portals, and controlled joint ventures — sitting in front of **~\$9.8 trillion** of U.S. demand, monetized through a 10-year-proven acquisition asset, and **already revenue-positive**.

Raising **\$12M** · \$60M post · **~4×** to early investors at a **year 3–5 PE step-in**

THE THESIS

Every company pays an **acquisition tax** to Big Tech. We own the doorway — and keep the margin.

American businesses spend **\$380 billion a year** renting access to their own customers from Google, Meta and Amazon. The Plus Network owns the top of the funnel across the largest industries, shares first-party data across every portal under **one ownership**, and moves that acquisition margin onto **our operating companies' bottom line** — anchored by a toll-free brand that has done exactly this for a decade.

WHERE THE MONEY GOES

A \$29 trillion economy. And a tax on reaching every customer.

\$29.2T

U.S. GDP (2024)

\$19.8T

U.S. consumer spending — 68% of GDP

\$380B

Spent every year just to **acquire** those customers (U.S. ad spend)

TOP U.S. CONSUMER CATEGORIES (\$T/YR) — AND THE PLUS PORTALS THAT OWN THEIR FRONT DOOR

Housing & utilities

mortgages.plus

\$3.3

Healthcare

medigap · kardiaguard · mammo

\$3.2

Financial services & insurance

medigap · 2xinvesting

\$1.9

Recreation & travel

retreats · cruise

\$1.2

Legal, personal & other services

attorney · makeup

\$1.4

THE EXTRACTION

Three companies collect ~\$481 billion to introduce you to your customer.

Global advertising revenue, 2024. At ~35% operating margins, roughly **\$170 billion of pure profit** is skimmed off businesses every year — the toll for demand a company could own itself.

Google (Alphabet)

Search + YouTube + Network

Meta (Facebook/IG)

Facebook + Instagram

Amazon Ads

Retail media

The Plus Network

we own the doorway — \$0 ad tax

The Plus Network pays \$0 of it.

We are not the advertiser — we are the destination. The margin that would flow to the ad platforms stays inside the network.

THE ARBITRAGE

Same demand. Different owner of the margin.

Today — the leaking funnel

Every operating company buys its customers back from Big Tech, over and over.

Business → pays ad tax → Google / Meta

Customer → owned by the platform

Margin → leaves the business

The Plus Network — the closed loop

We own the doorway, and every portal shares data under one roof.

Consumer → arrives at a Plus portal

Intent → scored by shared data

Margin → stays in the portfolio

Yes — we still pay to bring a consumer in the front door, once. From that moment on, moving that customer across every joint venture, owned product and Plus portal carries a **net cost of \$0 — no ad tax.** We are not the advertiser; we are the destination. That is where **accretive value** becomes powerful — the margin compounds, and cost per acquisition falls with every portal we add.

THE ANCHOR

1-800-MEDIGAP — a decade of proven demand, already contracted.

A toll-free vanity brand that has generated **hundreds of thousands of referrals over 10 years** — a "priceless, category-defining" asset that compounds rather than depreciates. It de-risks the entire thesis: the acquisition machine already works, at scale, with public-company customers.

10 yrs

Live, generating **100,000s of referrals**

\$80

Per call — contracted rate through the 1-800-MEDIGAP stack

2

Publicly-traded companies · **open-ended** 2027 insertion orders

\$77.1B

AgeTech market by 2034 · Signify/CVS **\$8B** comp

Why it anchors the valuation: vanity numbers are strategic, appreciating IP. With two public companies buying calls at \$80 apiece on uncapped orders, the anchor alone underwrites millions in high-margin revenue before the rest of the network contributes a dollar.

TRACTION — SIGNED & PENDING

This is not a concept. The **revenue is already contracted.**

\$100K+ / month

In **pending contracts** — over **\$1.2M of ARR** in the immediate pipeline.

2 public companies · \$80/call

2027 agreements with two publicly-traded companies — **open-ended insertion orders** for calls at \$80 each through the 1-800-MEDIGAP stack. Uncapped volume.

Peptides — 15% forever

Health & wellness contract for peptides, **retail and wholesale** — **15% of revenue in perpetuity**. Royalty income that never ends.

Revenue-positive

The stack is built, tested, and already producing revenue today

~\$9.8T

Combined market size of the industries we sit in front of

Perpetual

Royalty + recurring structures that compound, not churn

One engine. Every industry's front door.

● Gold — Plus Network owned .plus portals

● Teal — Holding-company-owned properties

● Purple — Joint ventures & partners

Plus Network industries ≈ \$9.8T · a holding company of owned properties · plus a growing bench of JV partners

COVERAGE & MOAT

We sit in front of **half the consumer economy** — and it compounds.

≈\$9.8T

Combined market size of the industries our portals own the funnel to

~50%

Of all \$19.8T in U.S. consumer spending — one network, one doorway

↓ CPA

Falls every year as shared data compounds across the portfolio

One ownership, shared data

Every portal & JV feeds one first-party + predictive dataset — **legal, durable, impossible to replicate** without the same portfolio.

Accretive by design

Each new portal makes every other one **cheaper to grow** — the opposite of buying media, where costs only rise.

Timed to the AI shift

As search fragments into AI answers, **owning the destination** — not renting the ad — is where the margin moves next.

THE STRUCTURE

A roll-up built to hand a PE firm an **easy 3–5×**.

Contributed as equity

R0cketShip IP & technology
1-800-MEDIGAP stack & brand
Predictive-data engine
Founder & operating team
Joint ventures we already control

The Plus Network (NewCo)

The acquisition company. Consolidates the assets above, **acquires the targeted JVs**, scales the anchor, and compounds one shared dataset across the whole portfolio.

\$2.4M 2027 revenue → scaling

PE steps in · year 3–5

A private-equity platform buys in, providing liquidity to early backers and **growth capital to complete the roll-up** — a proven, cash-generative platform where they add money and **see 3–5×**.

Early investors ride the build from \$60M to the PE step-in; the PE firm inherits a de-risked, contracted, data-moated platform primed to scale.

THE PUBLIC-MARKET CATALYST

A publicly-traded partner — and a **triple dip**.

A publicly-traded company is forming a joint-venture **NewCo** with us. It converts our private technology into a public-market engine — and it pays us three separate ways.

Dip 1 — Own the JV

We own **32% of the JV NewCo** — equity in a new operating company built on our stack.

Dip 2 — Own the shares

We also acquire **20M+ shares** of the partner's publicly-traded stock.

Dip 3 — Lift the stock, then the exit

Our technology **drives the partner's value up** — our shares appreciate — and once **NYSE-listed**, we hold a public-market engine to realize liquidity.

Part of this raise funds the equity position — taking our stake and positioning the network to draw value from the public markets once the engine lists on the NYSE.

FIVE-YEAR PLAN

From **\$2.4M** in 2027 to **\$110M** revenue, **\$42M** EBITDA by 2031.

\$M	2027	2028	2029	2030	2031
Revenue	2.4	8	22	55	110
Gross margin	60%	66%	70%	73%	75%
EBITDA	0.0	0.8	4.8	18	42
Live portals + JVs	8	14	20	26	32

32 live portals & JVs on the same rails — and we've identified and laid the foundation for the next 400. **Pure upside** on the scale for the exit — and every one adds to a compounding, increasingly valuable IP estate.

Management model — illustrative. Bars = revenue, line = EBITDA. 2027 anchored by contracted 1-800-MEDIGAP call revenue.

VALUATION

Enter at **\$60M** • PE steps in near **\$300M** • scales toward **\$1B**.

\$60M

This round • post-money
2026

~\$300M

PE step-in • yr 3–5
~5.5x revenue

~\$1B

PE scale-up exit
3–5x for the PE firm

How we value it

Digital-media & performance-marketing roll-ups trade at **3–6x revenue** / **10–15x EBITDA**. PE enters near **\$300M** (~5.5x 2030 revenue) and, by adding acquisition capital, scales toward **\$1B** — an easy 3–5x on their check.

Why the entry is cheap

\$60M today buys an **already-contracted, revenue-positive** platform — the 1-800-MEDIGAP anchor, live portals, IP, and a 400-strong pipeline — priced at a fraction of where the roll-up is engineered to land.

THE ASK

The stack is **built & revenue-positive**. The \$12M is for scale.

USE OF FUNDS — ALREADY BUILT VS. DEPLOYED TO SCALE

Predictive data engine & AI	\$2.5M	✓ built
Team — engineering, data, revenue	\$2.0M	✓ built
1-800-MEDIGAP call stack	\$3.5M	✓ owned
JV acquisitions & public-company JV stake	\$4.0M	33%
Working capital & G&A — demand generation	\$8.0M	67%

The stack is **already built, tested and revenue-positive** — so the raise funds **scale, not construction**. The majority of working capital powers **demand generation, which directly creates revenue**; part of acquisitions funds the **publicly-traded JV stake** (p.11).

EARLY-INVESTOR RETURN — AT PE STEP-IN

Investment	\$12M
Entry ownership (post-money)	20%
PE step-in value (yr 3–5)	~\$300M
Stake value (dilution-adjusted ~16%)	~\$48M
Return	~4x • ~40% IRR

Excludes upside from the public-company JV shares & the 400-portal pipeline. Returns modeled on management projections.

EXECUTIVE SUMMARY

The Plus Network, at a glance

The company

A roll-up consolidating R0cketShip's IP, the **1-800-MEDIGAP** anchor, live top-of-funnel portals and controlled JVs into one predictive-data operating company — already revenue-positive.

The opportunity

Businesses pay a **\$380B/yr** acquisition tax to Big Tech. We own the destination — and once a customer is in, moving them across the network costs **\$0 in ad tax**.

Proof, already contracted

10-yr anchor with **100,000s of referrals**; two public companies buying calls at **\$80 each**; **\$100K+/mo** pending; a **15%-perpetual** peptide royalty.

Public-market catalyst

A publicly-traded JV: **32% of NewCo** + **20M+ shares** + our tech lifting the stock — a **triple dip** with an NYSE liquidity engine.

The plan

Revenue **\$2.4M (2027) → \$110M (2031)**, EBITDA to **\$42M**; 32 live portals & JVs, with **400+ more identified** — pure upside for the exit.

The ask & return

\$12M at \$60M post. **~4x / ~40% IRR** to early investors at a **year 3–5 PE step-in** (~\$300M) scaling toward **\$1B**.

TERM SHEET — INDICATIVE

The ask sheet

Vehicle	The Plus Network (NewCo) — the acquisition company
Round	Seed / roll-up · priced preferred
Raise	\$12,000,000
Pre / Post-money	\$48M / \$60M
Equity offered	20%
Contributed to NewCo	R0cketShip IP · 1-800-MEDIGAP · controlled JVs · team
Minimum check	\$250,000
Liquidity	PE step-in, year 3–5 (~\$300M) · public-JV shares
Investor rights	Pro-rata · information rights · board seat (lead)
Target close	Rolling · first close at \$5M committed

What the money buys

An **asset-backed, already-contracted, revenue-positive** platform — a 10-yr anchor, live portals, a data engine, a 400-strong pipeline, and a publicly-traded JV stake — capitalized to complete the roll-up before PE steps in.

Projected outcome

\$110M revenue · \$42M EBITDA by 2031 · PE step-in ~\$300M · **~4x / ~40% IRR** to early investors, before public-JV & pipeline upside.

"This is the future of what the economy looks like. This is the future of what success looks like."
