

IF YOU KNOW, YOU KNOW

VOTER OPERATING SYSTEM

A 15-year, multi-stage program to elect and elevate conservative candidates — starting with one Congressional seat and scaling to move entire voting populations. Built by the best data, content, field, and AI operators in the country.

CODENAME

VOS

+ Project 1829 (18–29)

ENGAGEMENT

15-Year Exclusive

Donor-funded program

10-YR PROGRAM

~\$123.5M

all-in, mapped herein

Perry's eggheads — on steroids, with AI. In 2006, Rick Perry's campaign brought in a team of academic “eggheads” who treated elections as a science: randomized field experiments, turnout modeling, measured cause and effect (chronicled in *The Victory Lab*). VOS is that idea two decades later and orders of magnitude stronger — the same conservative, evidence-first discipline, now supercharged by AI, real-time voter data, a private delivery network, and a proprietary machine-learning model.

Prepared by **R0cketShip.com** in partnership with **Krystalore.com** · Jeff Cline · jeff.cline@me.com · 972-800-6670 · 5 Cowboys Way, Frisco, TX 75032

Executive Summary

Modern campaigns are won by a **data + content + field + measurement engine**. Obama 2012 proved the power of unified voter data, volunteer apps, A/B-tested messaging, and digital-to-field integration. Trump-era campaigns proved the power of always-on media ecosystems — earned media, creators, podcasts, and platform-native content. 2024 confirmed that digital, influencers, podcasts, texts, and early-vote operations are now **core infrastructure, not add-ons**.

The safest big idea in this document: **do not think “ads.” Think Voter Operating System** — a durable, donor-owned platform that compounds in value every cycle.

THE MISSION, IN THREE STAGES

STAGE 1 · YEARS 1–2

Win the seat.

Elect one hand-picked conservative to Congress. Stand up the full stack in one district, prove cost-per-net-vote, and bank a permanent data asset.

STAGE 2 · YEARS 3–6

Elevate & replicate.

Move that member up the ladder while cloning the machine for regional and local red candidates. Compound data and momentum into the next national cycle.

STAGE 3 · YEARS 7–15

Move populations.

Operate a multi-region voter operating system — plus a twin system (Project 1829) growing the next generation of conservative voters as they age in.

Exclusivity. This proposal secures R0cketShip + Krystalore as the **exclusive** technology, data, and strategy provider for the donor's red-candidate program for **15 years** across the defined regions — a moat no opponent can rent.

WHAT MAKES THIS A “GEEK” PROGRAM, NOT AN AGENCY

Every dollar is instrumented. Every channel reports a cost-per-net-vote. Losing tactics are cut weekly; winners are scaled the same day. A proprietary model — our **MML (Momentum Machine-Learning layer)** — connects the dots across voter file, behavior, content, and field to decide who to reach, with what, when, and where. All numbers in this document deliberately use the **high end of every benchmark range** — we overestimate on purpose so the budget never surprises the donor.

SECTION 02

Highest-Value “Geek” Activities

Ranked top to bottom by leverage. Each is a module in the operating system, each with a single primary KPI.

#	ACTIVITY	WHAT THE GEEK BUILDS	PRIMARY KPI
1	Unified voter CRM	One database for voter file, donors, volunteers, events, texts, calls, doors, ads	Matched voter IDs
2	Turnout scoring	Predict who is a likely supporter + low/mid turnout	Cost per net vote
3	Early vote / VBM funnel	Landing pages, reminders, ballot chase, status tracking	Early-vote signup
4	Digital ad testing	Meta / YouTube / CTV / Google creative tests	Cost per engaged voter
5	SMS + email mobilization	Consent-based reminder flows	RSVP, pledge, turnout
6	Volunteer field app	Door routes, scripts, live canvass results	Doors / contacts
7	Creator / influencer program	Local trusted voices, podcast clips, social proof	Cost per reach / signup
8	Content war room	Rapid-response short video, memes, explainers	Watch time / shares
9	Geo / event targeting	Rally, campus, church, union, civic-event follow-up	Event-to-voter conversion
10	Donation engine	Small-dollar funnels, recurring donor retargeting	Cost per donor
11	Ballot-info tools	Polling-place lookup, registration deadline reminders	Tool completions
12	Analytics dashboard	Daily ROI by channel, county, precinct	Spend-to-vote efficiency

SECTION 03

Cost Benchmarks

Planning ranges, not guarantees — costs move by state, race, season, audience, and compliance burden. **Per the donor's mandate, every budget line in this document uses the HIGH end of these ranges.**

CHANNEL / TACTIC	NEW-VOTER ACQUISITION	EXISTING-VOTER ENGAGEMENT	NOTES
Organic social / creator	\$0.25–\$3 / engaged	\$0.05–\$1	Best when creator already has trust
Email list activation	\$0.50–\$3	\$0.02–\$0.25	Strongest for known supporters
SMS opt-in / reminders	\$2–\$10	\$0.10–\$1.50	Must be consent / compliance-based
Meta ads	\$5–\$40 / action	\$0.50–\$8	CPA benchmarks in high-\$30s; CPMs low-mid teens
YouTube / video	\$8–\$50	\$1–\$10	Better for awareness than direct action
CTV / streaming	\$15–\$75	\$3–\$15	Strong persuasion; harder attribution
Search ads	\$10–\$60	\$2–\$12	High intent: “where do I vote,” “register”
Direct mail	\$20–\$100+	\$3–\$15	Committees spent tens of millions on mail in 2024
Phone banking	\$15–\$80	\$2–\$12	Works better with good data + live volunteers
Door knocking	\$25–\$150	\$5–\$25	Strongest turnout tool; ~\$19/added vote in some studies
Early-vote / ballot chase	\$5–\$35	\$1–\$8	Often highest ROI late-cycle
Voter registration drive	\$20–\$150+	N/A	Depends on geography & eligibility pool
Influencer / podcast	\$5–\$75	\$1–\$20	2024 proved podcasts/creators matter heavily

KPI Stack & Operating Model

EVERY CAMPAIGN KPI, BY FUNNEL STAGE

STAGE	KPI
Reach	CPM, impressions, unique reach, frequency
Attention	ThruPlay / completion, watch time, CTR
Trust	Shares, saves, comments, creator eng. rate
Action	Signups, pledges, donations, RSVPs
Voter ops	Registered, ballot requested, early-vote confirmed
Field	Doors, conversations, supporter IDs, universes
Efficiency	Cost / contact, / supporter ID, / ballot action
Final	Cost per net vote, turnout lift, precinct perf.

GEEK-LEVEL OPERATING MODEL

Build it like a revenue machine:

- **Data lake** — voter file + public records + volunteer/donor/event/ad data.
- **Identity resolution** — match people across email, phone, address, social, and voter ID where legally allowed.
- **Segmentation** — supporters, persuadables, low-propensity supporters, donors, volunteers, early voters.
- **Content engine** — test 20–50 creative angles weekly.
- **Channel engine** — Meta, YouTube, CTV, search, SMS, email, creators, field.
- **Daily dashboard** — county, precinct, spend, contacts, ballots, votes.
- **Optimization loop** — cut losing channels, scale winners, feed results back into the MML.

This is Perry's eggheads, industrialized. Field experiments → continuous, AI-run experimentation across every channel, every day.

The Architecture — Data Room, Command Center, AI

THE DATA ROOM

Secured voter data lake: national voter file, public records, consumer/enhancement data, and every first-party signal (donors, volunteers, events, calls, texts, doors, ad engagements). Identity resolution stitches one **Golden Voter Record** per person. Row-level security, full audit log, compliance guardrails by state.

THE COMMAND CENTER

A physical + virtual war room: live video wall, daily ROI dashboards down to precinct, rapid-response content desk, and a “single pane of glass” over spend, contacts, ballots, and votes. Secure comms and role-based access for the donor, principals, and field leads.

THE MML — MOMENTUM MACHINE-LEARNING

Our proprietary model layer. Predicts support, persuadability, and turnout propensity; assigns each voter to a universe; and recommends the next best action + channel + message. Learns from every experiment nightly. This is the “connect-the-dots” brain of the system.

THE SECRET WEAPON

Krystalore signal engine. A proprietary creative + audience system that finds the message-market fit others can't see. Retained at a **\$32,500/mo minimum**. If you know, you know.

PRIVATE NETWORK & OWN CDN — DELIVER ADS WHERE THE VOTERS ACTUALLY ARE

VOS runs on its **own private network**: five regional flagship servers placed across the major political regions, with sub-nodes (VPS) in every major voting area, all meshed over a secure VPN. On top of it we run **our own CDN** — so we deliver geo-precise ads and content to people exactly where they live, at edge speed, with attribution we control. The CDN is **white-labeled**: allied third-party conservative groups can tap our network to maximize their own output. **APIs are available on request at a credit level**, metered and billed.

REGION NODES

5 flagship

Southeast · Midwest · Mountain West · Southwest · Mid-Atlantic

EDGE / VOTING-AREA NODES

1 per major area

VPS sub-nodes on the mesh

SHARED CAPACITY

White-label CDN

3rd-party credit-metered API

SECTION 06

The Monthly Budget — How Every Dollar Is Spent

The media & operations budget ramps from **\$200,000/mo (Year 1)** to **\$500,000/mo (Year 4)**. **Staff is separate and additional (Section 07)**. Fixed minimums are locked first; the remainder buys the highest-ROI voter contact.

YEAR 1 — \$200,000 / MONTH

LINE ITEM	MONTHLY
R0cketShip Technology (minimum)	\$32,500
The Secret Weapon (minimum)	\$32,500
PredictiveData.org — 250k records	\$12,500
SMART OUTREACH email (1×500k)	\$10,000
Digital paid media (Meta/YT/CTV/Search)	\$56,000
SMS + email mobilization	\$12,000
Creator / influencer program	\$15,000
Field ops (doors / phones)	\$15,000
Direct mail — OUTREACH TECH	\$8,000
Content / creative production	\$6,500
Total	\$200,000

YEAR 4 — \$500,000 / MONTH

LINE ITEM	MONTHLY
R0cketShip Technology (scaled)	\$65,000
The Secret Weapon (scaled)	\$65,000
PredictiveData.org — 1M records	\$50,000
SMART OUTREACH email (5×500k = 2.5M)	\$50,000
Private network / CDN opex	\$30,000
Digital paid media	\$120,000
SMS + email mobilization	\$30,000
Creator / influencer program	\$40,000
Field ops (doors / phones)	\$30,000
Direct mail + content war room	\$20,000
Total	\$500,000

The scaling rules that never change: • Every **500,000 people** in the database adds **\$10,000/mo** of SMART OUTREACH (smart email). • Every **250,000 records** of PredictiveData.org = **\$12,500/mo**. • Direct mail (OUTREACH TECH) is a fixed **\$0.027 per member**. • R0cketShip Technology and The Secret Weapon each carry a hard **\$32,500/mo floor** before any add-ons.

Ramp path: Yr 1 \$200k → Yr 2 \$300k → Yr 3 \$400k → Yr 4 \$500k/mo, then held at \$500k/mo (Yrs 5–10) with Project 1829 as an optional parallel track.

SECTION 07

Staffing — Best-in-Space (Separate & Additional)

These salaries are NOT included in the media & operations budget. Staff is extra. Rates below are top-of-market for the best operator in each seat (base; load ~1.35x for fully-burdened cost).

TECHNOLOGY TEAM — MINIMUM 5

ROLE	BASE / YR
Chief Technology & Data Architect	\$360,000
Principal ML Engineer (MML lead)	\$325,000
Identity Resolution & Data Engineer	\$275,000
DevOps · Private-Network / CDN Engineer	\$265,000
Platform / Full-Stack Lead	\$255,000
Security & Compliance Engineer	\$245,000
Voter-File / Data-Pipeline Engineer	\$235,000
Tech subtotal (7)	\$1,960,000

OUTREACH TEAM — MINIMUM 5

ROLE	BASE / YR
Digital Advertising Director	\$255,000
Analytics & Insights Director	\$240,000
Field Operations Director	\$235,000
Creator & Influencer Program Director	\$220,000
Lifecycle (SMS / Email) Director	\$210,000
Content War Room Lead	\$205,000
Early-Vote / Ballot-Chase Manager	\$195,000
Outreach subtotal (7)	\$1,560,000

Core team base (14)	\$3,520,000 / yr	Fully-burdened (x1.35)	≈ \$4,750,000 / yr
----------------------------	-------------------------	-------------------------------	---------------------------

HIRING CHECKLIST — CONFIRM ONE A-PLAYER IN EVERY SEAT

Technology (5+):

- ☐ Chief Technology & Data Architect
- ☐ Principal ML Engineer — MML
- ☐ Identity Resolution & Data Engineer
- ☐ DevOps / Private-Network / CDN Engineer
- ☐ Platform / Full-Stack Lead
- ☐ Security & Compliance Engineer
- ☐ Voter-File / Data-Pipeline Engineer

Outreach (5+):

- ☐ Digital Advertising Director
- ☐ Analytics & Insights Director
- ☐ Field Operations Director
- ☐ Creator & Influencer Program Director
- ☐ Lifecycle (SMS / Email) Director
- ☐ Content War Room Lead
- ☐ Early-Vote / Ballot-Chase Manager

Hardware Package — Deployed End of Year 1

Once the model is proven in the first district, we buy the metal and go private. This capex converts a rented stack into an owned, defensible network — and unlocks the white-label CDN revenue line. Caveat: certain scale items — TV/CTV enhancement gear and additional digital-enhancement hardware — are quoted separately and can be phased on their own private network.

COMPONENT	DETAIL	CAPEX
5× Regional flagship servers	GPU-accelerated (MML/AI), high-density storage for the data lake, redundant power	\$425,000
Command Center hardware	Video wall, secure workstations, encrypted comms, on-prem backup	\$200,000
CDN edge nodes (initial 15)	One per major voting area, meshed to region nodes	\$150,000
Private network & security	Firewalls, VPN mesh, DDoS, zero-trust, key management	\$75,000
Year-1 hardware package		\$850,000

Twin sets, later. As Project 1829 matures, we stand up a **second, parallel** hardware set dedicated to the 18–29 cohort — so the youth system scales on its own metal without starving the core. Edge-node count grows every year as we cover more voting areas.

SECTION 09

The API Stack — Everything We Connect

The dots the MML connects. Proprietary + best-in-class third-party. Metered APIs are re-exposed to allied groups at a credit level.

API / SOURCE	PURPOSE	COST BASIS
R0cketShip.com API	Core platform — CRM, tracking, dashboards, orchestration, white-label	incl. in Technology floor
PredictiveData.org	Voter enhancement + predictive scoring	\$12,500/mo · 250k records*
OUTREACH TECH (SMART OUTREACH)	Direct mail delivery — fixed	\$0.027 / member
Voter file (L2 / i360 / Aristotle)	Registration, history, districts	license
TargetSmart / data trust	Modeled scores, matchback	license
Meta Marketing API	Ad delivery + audience sync	% of media
Google / YouTube Ads API	Search + video delivery	% of media
The Trade Desk / CTV programmatic	Streaming & CTV persuasion	% of media
Twilio (SMS + Lookup)	Consent-based texting, carrier verify	usage
Email (SendGrid / dedicated IPs)	SMART OUTREACH smart email	\$10k/mo · 500k*
Google Civic Information API	Polling place, officials, deadlines	low / free
Identity / address (Melissa, geocode)	Identity resolution + geo	usage
WinRed / Stripe	Small-dollar & recurring donations	% of donations
MML (proprietary)	Support / persuasion / turnout scoring + next-best-action	owned

*Scaling rule, per Section 06. All third-party media APIs billed as a transparent % of the media they deliver.

Interactive Web & the Voter Calculator

Every public property is interactive and instrumented. The centerpiece is the **Voter Calculator** — a tool that turns a donor's dollars, or a candidate's district, into a projected outcome, and turns a citizen's ZIP into their personal ballot plan.

FOR THE DONOR / CAMPAIGN

- Input budget → projected contacts, supporter IDs, and **net votes** at the high-end cost benchmarks.
- Model by district, channel mix, and timeline.
- Live “what happens if we add \$X/mo” slider.

FOR THE VOTER

- ZIP → registration status, deadlines, polling place, early-vote options.
- One-tap ballot plan + reminders (SMS/email opt-in).
- Feeds the data lake (consented) — every interaction is a signal.

White-label everywhere. The calculator and the whole VOS front end ship as a Core module — any allied white-label site inherits it, gated behind **medigap.plus/vos** (password: on request). If you know, you know. 🚀

Project 1829 — Winning the 18–29 Vote

Same operating system, re-pointed at the future. Project 1829 runs the identical VOS stack but reallocates **40% of the budget** to voters aged 18–29 — because we don't just need votes this cycle, we need to **train and hold a generation**. What that extra 40% buys, and how it differs:

WHERE THE 40% GOES DIFFERENTLY

ACTIVITY	SHARE OF THE 40%
Creator & podcast army (micro-influencers, campus voices)	30%
Short-form video war room (TikTok/Reels/Shorts native)	22%
Campus + event field ops (registration, first-time voters)	16%
Gaming / streaming / Discord / CTV-youth placements	14%
SMS-first mobilization (the channel they answer)	10%
Youth data enhancement & longitudinal tracking	8%

KEY DIFFERENCES VS. THE CORE SYSTEM

- **Trust > reach.** Local, relatable creators over polished ads — the 2024 lesson, amplified.
- **Register-first funnel.** Many are not yet registered; the KPI shifts to **new registrations + first-vote conversion**.
- **Platform-native everything.** Vertical video, memes, streamers, podcasts — no repurposed TV spots.
- **SMS + DM, not direct mail.** Mail share drops sharply; texting and social DM rise.
- **Longitudinal cohort.** We track this cohort year over year as they age in — building a **compounding conservative base**.
- **Its own twin hardware set** as it scales (Section 08), so it never starves the core.

Why now: the cheapest lifetime voter you will ever acquire is a persuadable 19-year-old. Project 1829 is how the movement wins the 2030s.

SECTION 12

10-Year Executive Summary — Cost to Build

All figures \$M. Media & Ops = the “laid” monthly budget annualized. Staff = fully-burdened, separate & additional. Hardware = owned network capex + expansion. Overestimated on purpose.

YEAR	MEDIA & OPS	STAFF (LOADED)	HARDWARE / NETWORK	ANNUAL TOTAL
Year 1 (\$200k/mo)	\$2.40	\$4.75	\$0.85	\$8.00
Year 2 (\$300k/mo)	\$3.60	\$5.08	\$0.40	\$9.08
Year 3 (\$400k/mo)	\$4.80	\$5.44	\$0.45	\$10.69
Year 4 (\$500k/mo)	\$6.00	\$5.82	\$0.50	\$12.32
Year 5	\$6.00	\$6.23	\$0.50	\$12.73
Year 6	\$6.00	\$6.66	\$0.45	\$13.11
Year 7	\$6.00	\$7.13	\$0.45	\$13.58
Year 8	\$6.00	\$7.63	\$0.50	\$14.13
Year 9	\$6.00	\$8.16	\$0.45	\$14.61
Year 10	\$6.00	\$8.74	\$0.50	\$15.24
10-Year Total	\$52.8	\$65.6	\$5.05	\$123.5

Project 1829 twin track (optional parallel) and separately-quoted scale items (TV/CTV enhancement, additional digital-enhancement hardware, dedicated private network) are additive and phased on approval.

YEAR-1 ALL-IN

\$8.0M

STEADY-STATE / YR

~\$13–15M

10-YEAR PROGRAM

~\$123.5M

The Bid & The Ask

WHAT THE DONOR SECURES

- **15-year exclusive** technology, data & strategy partnership.
- A **donor-owned Voter Operating System** that compounds every cycle.
- Stage 1: a **Congressional seat**, won on measured cost-per-net-vote.
- Stage 2–3: a replicable machine for regional/local red candidates + population-scale reach.
- **Project 1829** — a compounding, next-generation conservative base.
- A **white-label CDN + API** allied groups pay to use — an asset that offsets cost.

THE COMMITMENT	
Media & Ops — Year 1	\$200,000/mo
Ramp to Year 4	\$500,000/mo
R0cketShip Technology floor	\$32,500/mo
Secret Weapon floor	\$32,500/mo
Staff (separate & additional)	~\$4.75M/yr
Year-1 hardware package	\$850,000
10-year program	~\$123.5M

The safest big idea, one more time: don't buy ads — build the **Voter Operating System**. Perry's eggheads proved the science. VOS is that science on steroids, with AI, owned end-to-end, exclusive to you for 15 years. **If you know, you know.** 🚀
